

AI-Powered Sales Performance Analysis | MySQL + ChatGPT + Power BI

Prepared by: Tanishka Anand | Data: 2,823 B2B Sales Records | Tools: MySQL, ChatGPT, Power BI

\$10.03M

Total Revenue

2823

Total Orders

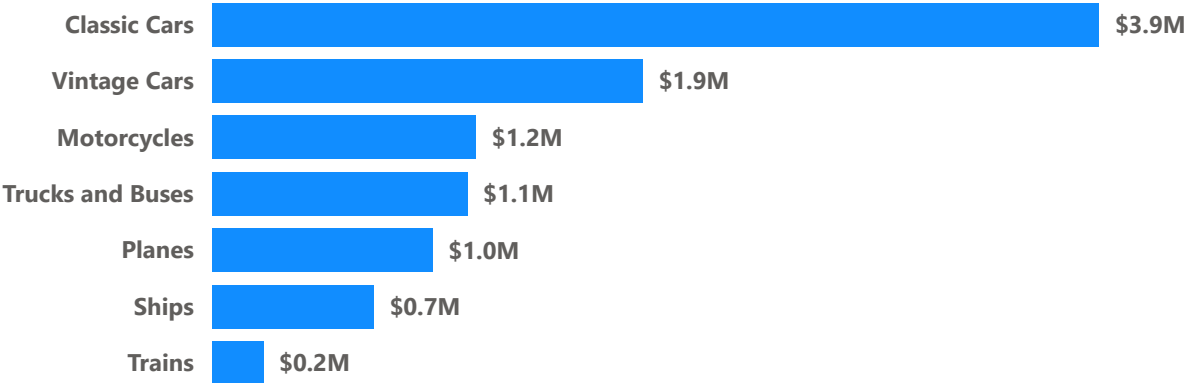

USA

Top Country

\$3.55K

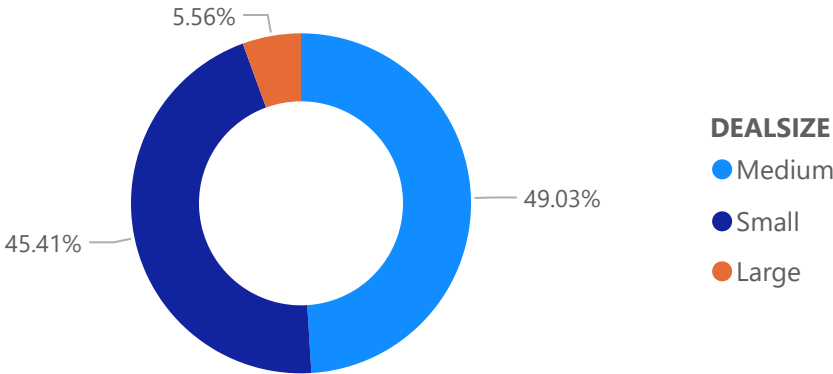

Average Order Value

Revenue by Product Line

*Classic Cars = 39.1% of total revenue
Trains = lowest at 2.3% — \$226,243*

Deal Size Distribution by Order Volume

*Large deals = only 5.6% of orders
but AOV = \$8,293 — 4x Small deals (\$2,061)
Biggest untapped revenue opportunity*

AI vs SQL Validation Summary

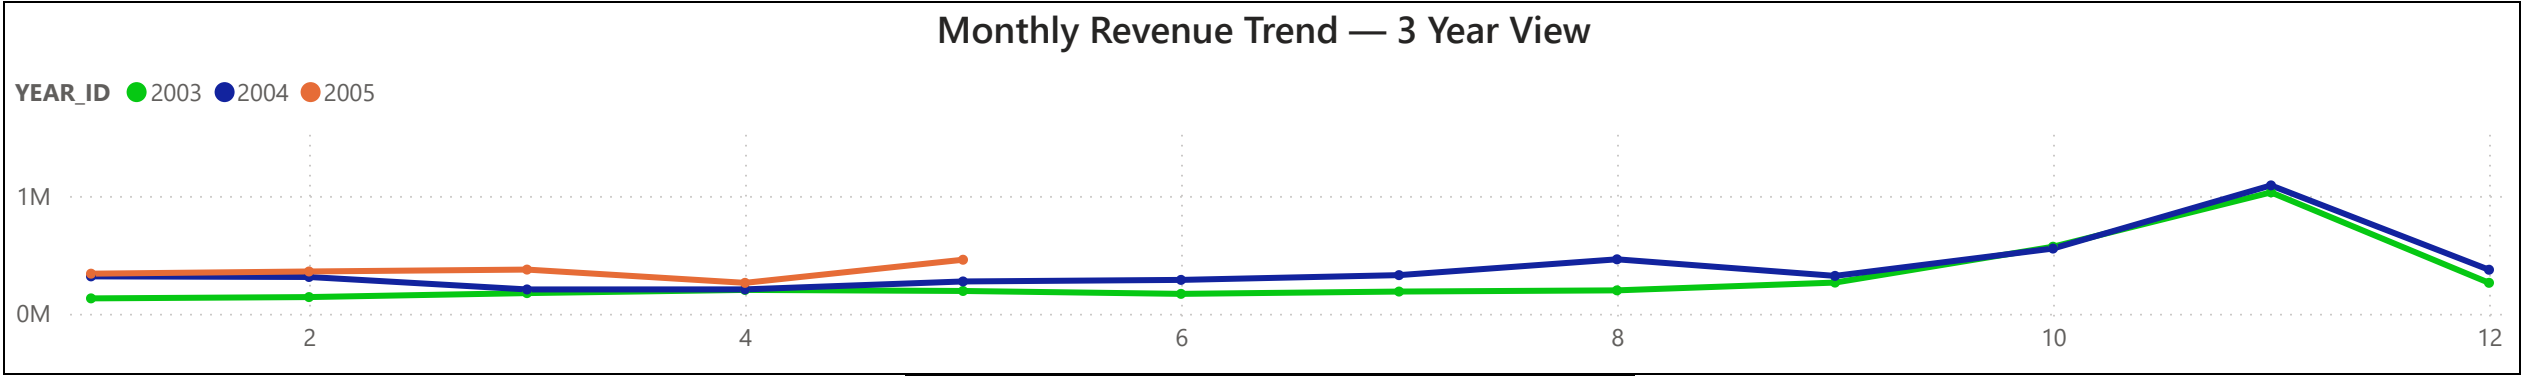

10 claims tested across 5 prompts
✓ 5 Correct
~ 3 Partial or Misleading
X 1 Wrong
? 1 Logically Unsupported

Most dangerous error:

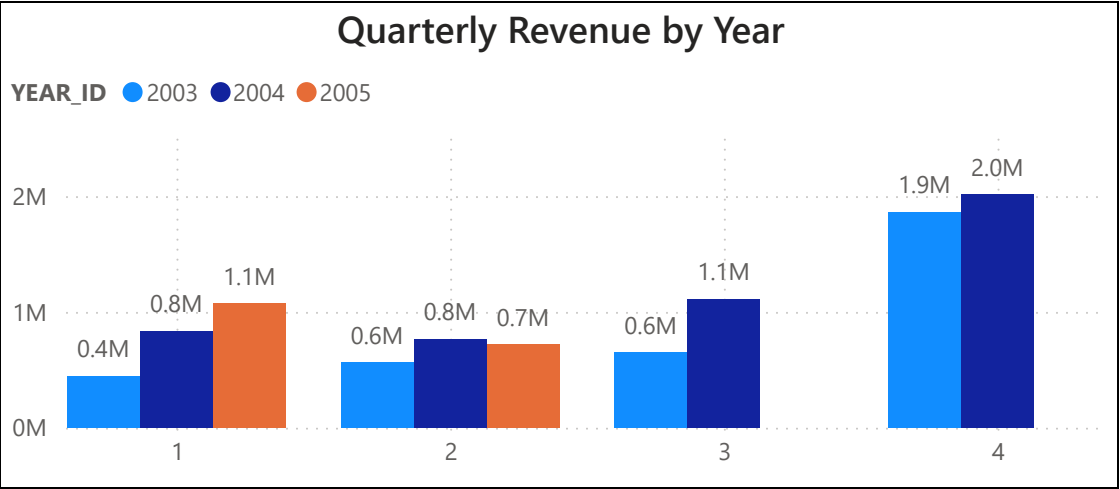

ChatGPT said April is weakest month across all years.
SQL showed: Jan 2003 (\$129K) and Mar 2004 (\$205K) are both weaker than April in their years.

Seasonality Analysis | 2003-2005

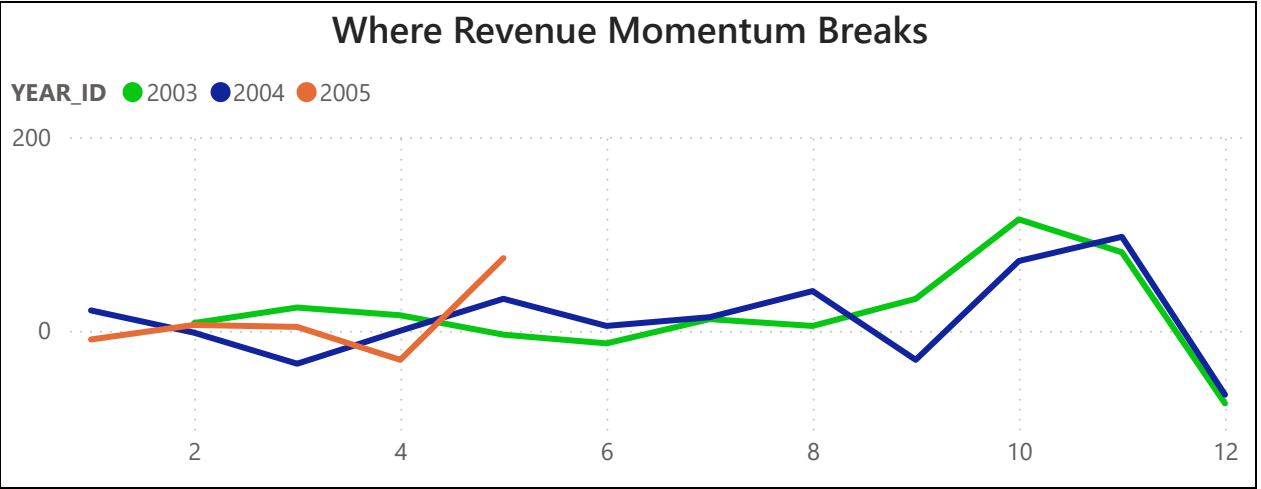

Prepared by: Tanishka Anand | Data: 2,823 B2B Sales Records | Tools: MySQL, ChatGPT, Power BI

November Peak
2003: \$1,029,837
2004: \$1,089,048
18.1% of 2004 annual revenue
Pipeline risk if Q4 underperforms

Q4 2004 = \$2,014,774
Q4 dominates every year
Structural dependency — not seasonal variation

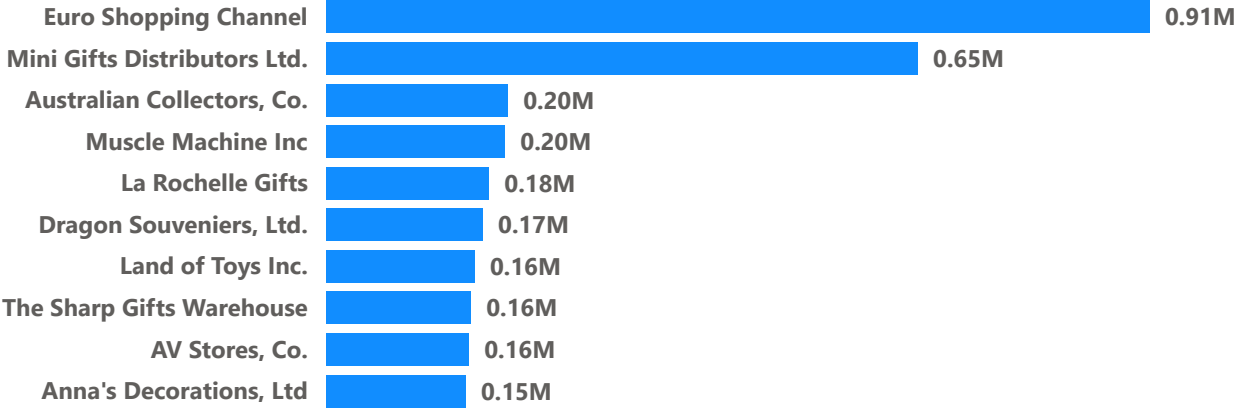

December 2003: -74.6% drop
December 2004: -65.8% drop
Pattern is systemic — not a one-year anomaly

Customer & Geographic Risk Analysis | 2003-2005

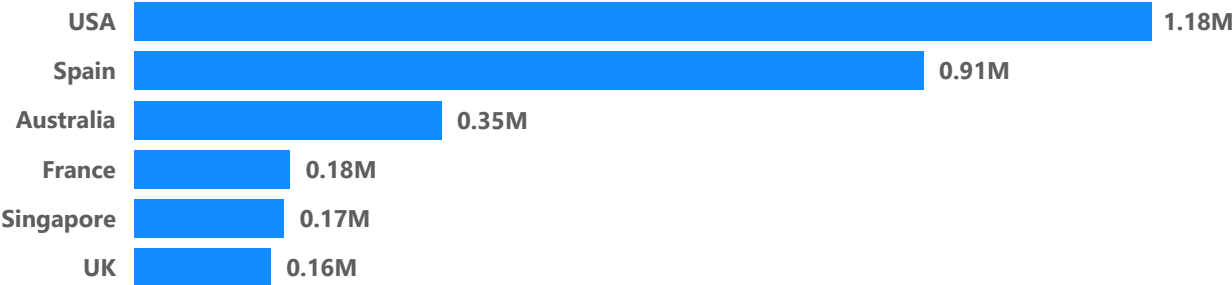

Prepared by: Tanishka Anand | Data: 2,823 B2B Sales Records | Tools: MySQL, ChatGPT, Power BI

Top 10 Customers by Revenue

Euro Shopping Channel = 9.09% of total revenue
Single account loss = \$912,294 impact
Greater than Trains + Ships combined (\$940,680)

Geographic Revenue Concentration

USA + Spain drive highest single account risks
Mini Gifts Distributors (USA) = \$654,858
Euro Shopping Channel (Spain) = \$912,294

Top Customer Per Country — Revenue Concentration
